INDUSTRY MENTOR NAME: Ms. KUSHBOO

FACULTY MENTOR NAME: Mr. M MOHAMMED MUSTAFA

INTRODUCTION

1.1 Project Overview

This project is based on an expense and income tracking system. This project aims to create an easy, faster and smooth tracking system between the expense and the income. This project also offers some opportunities that will help the user to sustain all financial activities like digital automated diary. So, for the better expense tracking system, we developed our project that will help the users a lot. Most of the people cannot track their expenses and income one way they face a money crisis, in this case daily expense tracker can help the people to track income-expense day to day and making life tension free. Money is the most valuable portion of our daily life and without money we will not last one day on the earth. So using the daily expense tracker application is important to load a happy family. Daily expense tracker helps the user to avoid unexpected expenses and bad financial situations. This Project will save time and provide a responsible lifestyle.

1.2 Purpose

The main reason you should track your expenses is **to identify and eliminate wasteful spending habits in your financial life**. Moreover, consistently tracking your expenses will help you maintain control of your finances, and promote better financial habits like saving and investing. Recording your expenses daily can ensure that you are financially aware all year long and not just during tax season. Knowing where your money is going and how much you're spending can improve your spending habits. Plus, you'll have a better idea of where you can allocate money to positively impact your bottom line.

LITERATURE SURVEY

2.1 Existing problem

As a user We face many difficulties in our daily file. In our daily life money is the most important portion and without it we cannot last one day on earth but if we keep on track all financial data then we can overcome this problem. Most of the people cannot track their expenses and income one way they face the money crisis and depression. This situation motivates us to make an android app to track all financial activities. Using the Daily Expense Tracker user can be tracking expenses day to day and making life tension free.

Horoshiy; Saveliy A. Karpukhin(2021, IEEE)**2.3 Problem Statement Definition**

Many organizations have their own system to record their income and expenses, which they feel is the main key point of their business progress. It is good habit for a person to record daily expenses and earning but due to unawareness and lack of proper applications to suit their privacy, lacking decision making capacity people are using traditional note keeping methods to do so. Due to lack of a complete tracking system, there is a 2 constant overload to rely on the daily entry of the expenditure and total estimation till the end of the month.

Who does the problem affect?	People getting regular wages.
What is the issue?	The paper based expense tracker system does not provide the user portability, existing system only used on paper based records so unable to update anywhere expenses done and unable to update the location of the expense details disruptive that the proposed system.
When does the issue occurs?	When the digits could not be recognized correctly. When the transactions are not successful. When the elder people unable to understand the smaller handwritten digits. When the paper based expense tracker records are subjected to fire accident, flood, etc.
Where is the issue occurring?	The issue occurs when the person is unable to track his income and expenditure.
Why is it important that we fix the problem?	By solving this issue those people getting regular wages can track their expenses and avoid unwanted expenses.

IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

3.2 Ideation & Brainstorming

Template

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

⌚ 10 minutes to prepare
👥 1 hour to collaborate
👤 2-8 people recommended

➔

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

⌚ 10 minutes

A

Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B

Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

C

Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#) ➔

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

⌚ 5 minutes

PROBLEM

Personal finance entails all the financial decisions and activities that a Finance app makes the easier by helping the user to manage their finances efficiently. A personal finance app will not only help them with budgeting and accounting but also give helpful insights about money management.

Key rules of brainstorming

To run a smooth and productive session

Stay in topic.

Defer judgment.

Go for volume.

Encourage wild ideas.

Listen to others.

If possible, be visual.

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

⌚ 10 minutes

TIP

You can select a sticky note and hit the pencil [switch to sketch] icon to start drawing!

Shakthi Dharun R

Expenses will be added correctly	Wallet balance can be updated periodically	Creating application for spending money in a proper way is very useful for people
Authentication should be work properly for users.	Budgeting and accounting can be maintain properly	Budget can be made correctly according to the user's requirement

Ranganathan R

In this app, Expenses can be moved according to the user's preference	This app helps to manage the income and spending money that can help maintain correct balance	This app stores value and the possibilities for spending money
So in this way it is easy for the user to keep down the expenses	This app also allows for a detailed record of the money spent and the user can avoid it	If the expense is higher than the income it will alert the user in that way the user can avoid it

Vishnu N

This app helps to make your financial decisions efficiently	User can set a limit for the amount to be used for that month	If the limit of that month expenditure exceeds the user will be notified and an email alert
This app not only helps you with budgeting but also helps you in money management	This app provides information and the events in the app so that user can make financial decisions	This app should store the user details for future use

Raja Guru J

Records daily incomes by calculating expenses regularly	Tracking of business and personal expenses separately in one app	The expenses details are easy to understand
This app should maintain record of every expense of the user by tracking. These expenses are recorded in the	When the wallet balance is short it should alert the user periodically	The app also, manage and get a report of your finances.

3

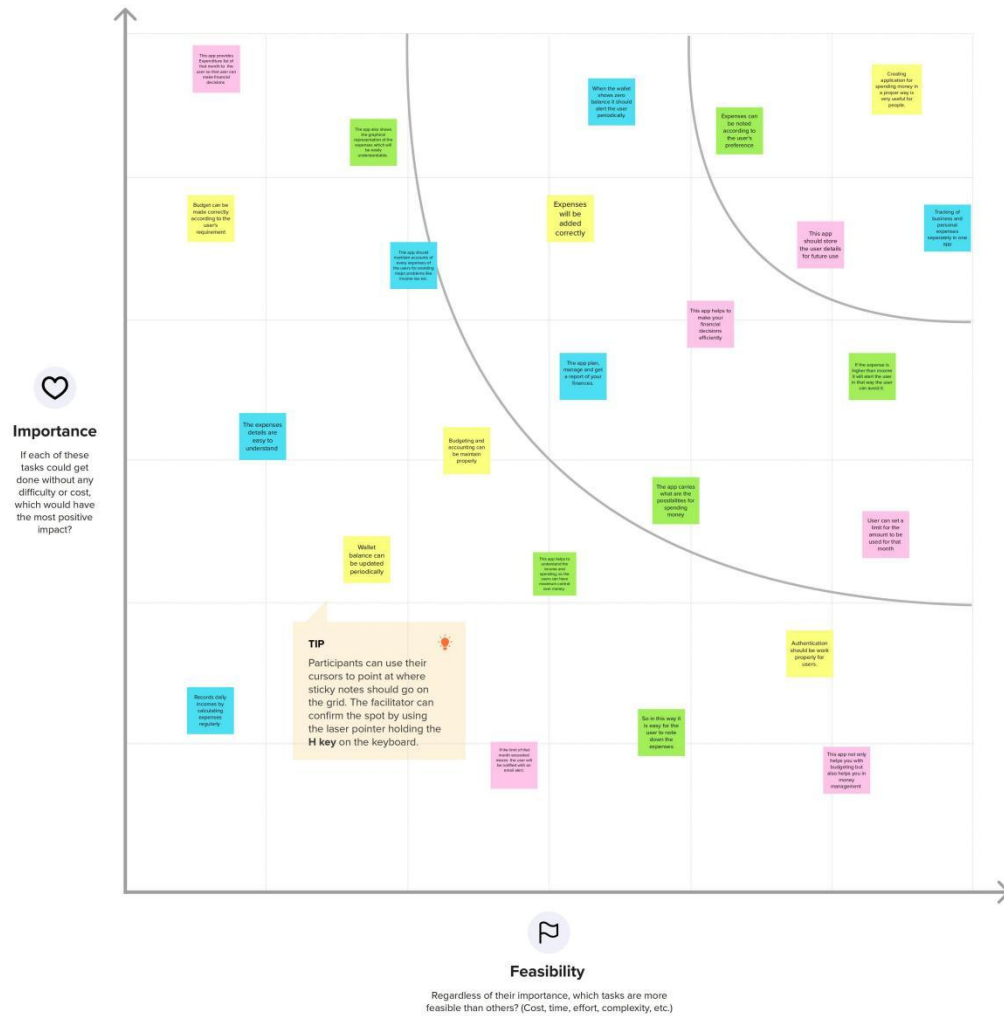

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you and break it up into smaller sub-groups.

🕒 20 minutes

The image shows a digital workspace with a light gray background. In the center, there is a cluster of sticky notes. At the top left of the cluster, there are two yellow sticky notes: one with the text "The app also shows the practical representation of the expenses which will be easily understandable" and another with "Budgeting and accounting can be maintained properly". Below these, there are two pink sticky notes: one with "This app not only helps you with budgeting but also helps you in money management" and another with "The app helps in understanding the flow and trends in the account and also allows you to view the account history". At the bottom of the cluster, there are two blue sticky notes: one with "When the wallet shows zero balance it should alert the user periodically" and another with "Authentication should be work properly for users". To the right of the sticky notes, there is a yellow tip box with a lightbulb icon and the text: "TIP Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural." In the bottom left corner, there is a faint watermark that says "mural".

Price

3.3 Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Modern life offers a excessive options of services and goods for consumers. As a result, people's expenses have gone up dramatically, e.g., compared to a decade ago, and the cost of living has been increasing day by day. Thus it becomes essential to keep a check on expenses in order to live a good life with a proper budget set up.
2.	Idea / Solution description	<p>Our goal is to create an personal expense tracking application where user can be tracking all financial activities and view previous income and expense report.</p> <ul style="list-style-type: none">➤ User can easily review the reports daily, weekly, monthly or yearly.➤ User can update or delete records.➤ User can get notification daily.➤ Create Category and Change currency.➤ User can also change Notification time and modify some features.➤ Add Expense and Income
3.	Novelty / Uniqueness	Personal Expense Tracker is a simple application. Writing in a user's pocket handbook every time during income and expense is not convenient and it is easy because of this application, the user will be able to manage the money through his/her smart devices without any hassle under any circumstances. Users just need to enter income and expense and the app calculates

		it for users. This application is very easy, fast and secure with money calculation and online mode service
4.	Social Impact / Customer Satisfaction	<ul style="list-style-type: none"> ➤ Eliminate paper, automatically route expense report to the user and reducing time & cost of processing which help customer to save their time. ➤ Software reduces like-hood of data entry errors and can find duplicate entries so that customer don't do any extra payments ➤ Reporting and analytics provide real time insight into expense by user as category which enable customer to spend their time on higher value task
5.	Business Model (Revenue Model)	Freemium Model
6.	Scalability of the Solution	<ul style="list-style-type: none"> ➤ Payment mode embedded with the app ➤ The application can be used to collect samples of data related to user's expenses with permissions and use those sample data as parameters to evaluate patterns of spending. ➤ Using some data mining technique expenses can be classified and can be used in market analysis and planning. ➤ This application will not only helps users to manage their expenses but also help marketing executives to plan marketing according to the needs of users.

3.4 Problem Solution fit

Define CS, fit into CC

1. CUSTOMER SEGMENT(S)

CS

Who is your customer?
i.e. working parents of 0-5 y.o. kids

Students
House wife
Employees
Retailers
Business man

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS

J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

Customers need to manage their expense
Need to save money
Know their daily/ weekly/ monthly/ yearly expense
Tracking and visualization of income and expense
Alert when expense exceeds the limit

3. TRIGGERS

TR

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

Customers are triggered when they see their expense is higher than their income.

When they came to know about more productive and efficient way to manage their expense.

When they want to save the money

4. EMOTIONS: BEFORE / AFTER

EM

How do customers feel when they face a problem or a job and afterwards?

i.e. lost, insecure > confident, in control - use it in your communication strategy & design.

Before:

Feel like spendthrift

Spending money on unwanted things

Incapable to manage money

Not saving for future

After:

Feel like thrifty

Capable to manage money

Saving for future plans

Using income on important works

6. CUSTOMER CONSTRAINTS

CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

Internet Dependence

Reduced Speed

Internet reliance

Security

Restricted Functionality

Availability

Web Issues

Browser Support

9. PROBLEM ROOT CAUSE

RC

What is the real reason that this problem exists?
What is the back story behind the need to do this job?
i.e. customers have to do it because of the change in regulations.

People dont check their spending and create a budget, they have no control whatsoever on money. Instead, money control them, and they either have perpetual lack of funds or will end up steeped in debt.

So many people don't have great financial management skills, they will not know how to categorize your expenses.

When they don't keep a watch on your spending, there will be short of money, always. This will stress them out.

People are spending money frivolously, they not have money to set financial goals.

10. YOUR SOLUTION

SL

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality.
If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

This application help the users to add their expenses so they can get an analysis of their expenditure in graphical form. They have option to set the limit of amount to be used for a particular month and if the limit exceed the user will be notified with alert message.

5. AVAILABLE SOLUTIONS

AS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

Customer in past tried a lot of things to manage their expense like sticky notes, spreadsheet and ledger that cause confusion, data inconsistency problems while recording and splitting of expenses. All they need is a person to maintain their expense and show their statistics. But all people can't afford a separate person to manage their own expenses. So in this modern world they need an app which makes their management easier.

Explore AS, differentiate

7. BEHAVIOUR

BE

What does your customer do to address the problem and get the job done?
i.e. directly related: find the right solar panel installer, calculate usage and benefits;
indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

Customers are given instant access to online chat features with knowledgeable staff members.
Customers are given the option to email the application support team with questions or concerns and make sure the response time is fast.
Give customers the option of using the phone and talking to a live operator because some consumers are averse to or unfamiliar with virtual communication forms.

Focus on J&P, tap into BE, understand RC

8. CHANNELS of BEHAVIOUR

CH

8.1 ONLINE

What kind of actions do customers take online? Extract online channels from #7

8.2 OFFLINE

What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

Online:

Social Media Marketing

Existing Customer Recommendation

Identify strong TR & EM

REQUIREMENT ANALYSIS

4.1 Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Calendar	Personal expense tracker application shall allow user to add the data to their expenses.
FR-4	User monthly income data	Data to be registered in the app
FR-5	Alert/ Notification	Alert through E-mail Alert through SMS
FR-6	User Budget Plan	Planning and tracking of user expense vs budget limit

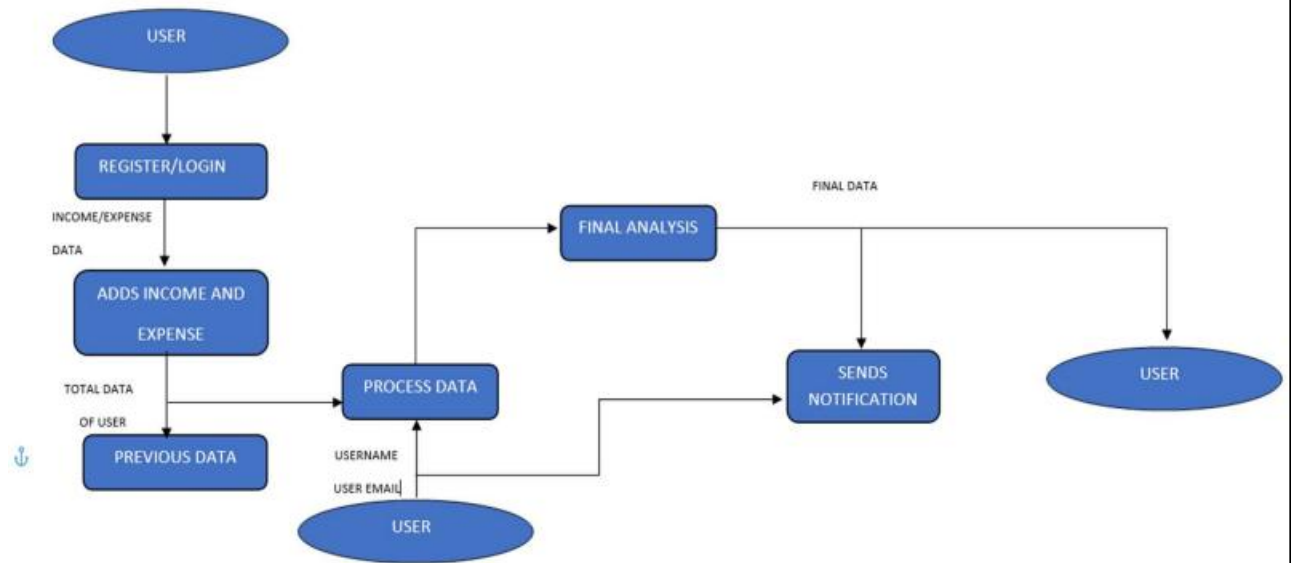

4.2 Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Expense Tracker is highly reusable. The application can be modified for just about anything!
NFR-2	Security	Authentication, Authorization, Encryption, Application security testing. More security of the customer data and bank account details.
NFR-3	Reliability	Each data record is stored on a well built efficient database schema. There is no risk of data loss.
NFR-4	Performance	Application performance monitoring (APM)
NFR-5	Availability	It is available all the time, no time constraint
NFR-6	Scalability	Capacity of the application to handle growth, especially in handling more users.

PROJECT DESIGN

5.1 Data Flow Diagrams

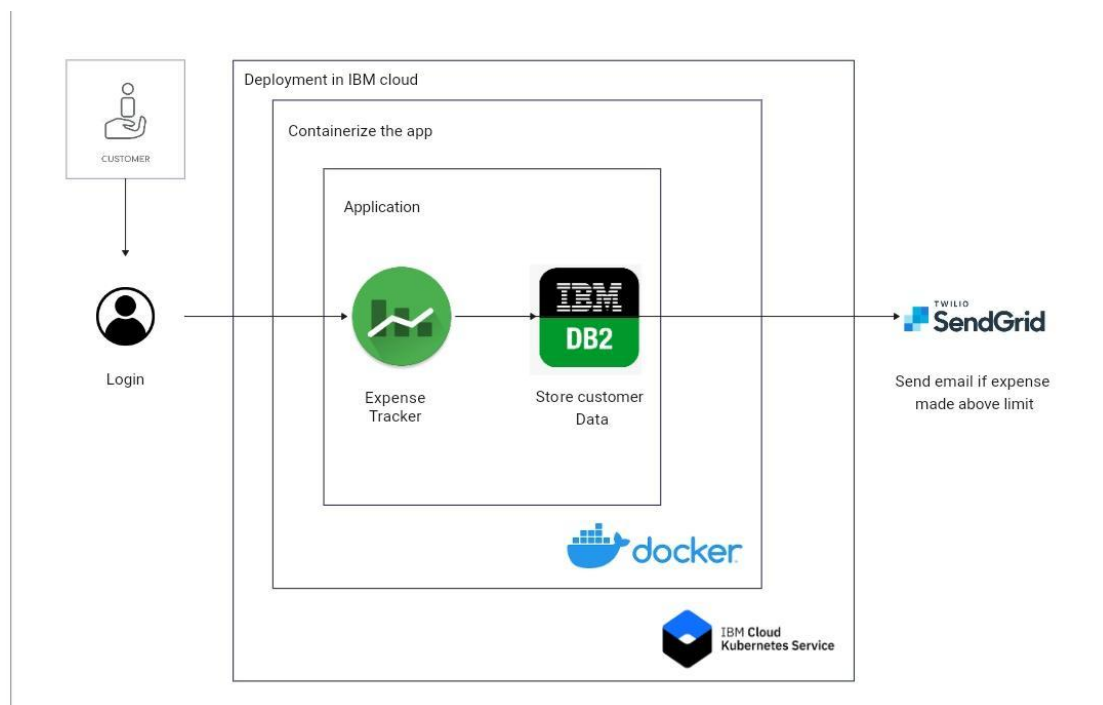

5.2 Solution & Technical Architecture

S.No	Component	Description	Technology
1.	User Interface	How user interacts with application e.g., Web UI, Mobile App, etc.	HTML, CSS, Python flask
2	Registration	User register in the application to start the process	HTML, CSS, Python flask, IBM cloud, IBM Container registry
3	Login	User login to their account	HTML, CSS, Python flask, IBM cloud, IBM Container registry
4	Wallet page	User can add their expenses in the wallet	HTML, CSS, Python flask, IBM cloud, IBM Container registry
5	Cloud Database	Database Service on Cloud	IBM DB2, IBM Cloudant etc.
6	Email alert	User can be notified when their expenses cross the limit in the wallet	Kubernetes, IBM container registry, SendGrid
7	Graphical view	User can able to see their monthly expenses in a	IBM cloud object storage, IBM container

		graph format	registry, HTML, CSS
--	--	--------------	---------------------

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Docker and Kubernetes are the open source frameworks	Docker, Kubernetes
2	Security Implementations	IBM DB2 is used for the security control	IBM DB2
3	Scalable Architecture	This architecture connects the three dimensions like processing, storage and connectivity between the user and the system	Python flask, IBM container registry
4	Availability	It is always available	Python flask and IBM cloud
5	Performance	The application can perform well user can experience the fast while using the application	Python flask and IBM cloud

PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	2	High	Shakthi Dharun
Sprint-1		USN-2	As a user, I will receive confirmation email once I have registered for the application	1	High	Vishnu
			As a user, I can register for the application through Gmail	1	High	Shakthi Dharun
Sprint-1	Login	USN-3	As a user, I can log into the application by entering email & password	1	High	Ranganathan
Sprint-1	Dashboard	USN-4	As a user, I can add income and expenses in the application	2	High	Raja Guru
Sprint-2	Charts	USN-2	Creating various graphs and statistics of customer's data	1	Medium	Shakthi Dharun
Sprint-2	Connecting to IBM DB2	USN-3	Linking database with dashboard	2	High	Vishnu
Sprint-2		USN-4	Making dashboard interactive with JS	2	High	Raja Guru

Sprint-3		USN-1	Wrapping up the server side works of frontend	1	Medium	Ranganathan
Sprint-3	Watson Assistant	USN-2	Creating Chatbot for expense tracking and for clarifying user's query	1	Medium	Shakthi Dharun
Sprint-3	SendGrid	USN-3	Using SendGrid to send mail to the user about	1	Low	Vishnu
Sprint-3		USN-4	Integrating both frontend and backend	2	High	Raja Guru
Sprint-4	Docker	USN-1	Creating image of website using docker	2	High	Ranganathan
Sprint-4	Cloud Registry	USN-2	Uploading docker image to IBM Cloud registry	2	High	Shakthi Dharun
Sprint-4	Kubernetes	USN-3	Create container using the docker image and hosting the site	2	High	Vishnu
Sprint-4	Exposing	USN-4	Exposing IP/Ports for the site	2	High	Raja Guru

6.2 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022

Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022
----------	----	--------	-------------	-------------	----	-------------

CODING & SOLUTIONING

Feature 1

User Login

The **login page** allows a user to gain access to an application by entering their username and password or by authenticating using a social media login.

Code:

```
<!DOCTYPE html>

TESTING

8.1 Test Cases

Test case ID	Feature Type	Component	Test Scenario
LoginPage_TC_OO1	Functional	Home Page	Verify user is able to see the Login/Signup popup when user clicked on My account button
LoginPage_TC_OO2	UI	Home Page	Verify the UI elements in Login/Signup popup
LoginPage_TC_OO3	Functional	Home page	Verify user is able to log into application with Valid credentials
LoginPage_TC_OO4	Functional	Login page	Verify user is able to log into application with Invalid credentials
LoginPage_TC_OO4	Functional	Login page	Verify user is able to log into application with Invalid credentials
LoginPage_TC_OO5	Functional	Login page	Verify user is able to log into application with Invalid credentials
AddExpensePage_TC	Functional	Add Expense Page	Verify whether user is able to add expense

Pre-Requisite	Steps To Execute	Test Data
None	1. Go to website 2. Home page appears	Username: shakthidharun@gmail.com password: password123
Home	1.Go to website 2.Enter details and click login	Username: shakthidharun@gmail.com password: password123
Username & password	1.Go to website 2.Enter details and click login	Username: shakthidharun@gmail.com password: password123
Username & password	1.Go to website 2.Enter details and click login	Username: shakthidharun@gmail.com password: password123
Login first	1.Go to website 2.Enter details and click login	Username: shakthidharun@gmail.com password: password123
Login first	1.Go to website 2.Enter details and click login	Username: shakthidharun@gmail.com password: password123
Have some expense to add	1. Add date, expense name and other details 2.Check if the expense gets added	add electricity bill = 6000

Expected Result	Actual Result	Status
Login/Signup popup should display	Working as expected	Pass
Application should show below UI elements: a.email text box b.password text box c.Login button with orange colour d.New customer? Create account link e.Last password? Recovery password link	Working as expected	Pass
User should navigate to user account homepage	Working as expected	Pass
Application should show 'Incorrect email or password ' validation message.	Working as expected	Pass
Application should show 'Incorrect email or password ' validation message.	Working as expected	Pass
Application should show 'Incorrect email or password ' validation message.	Working as expected	Pass
Application adds expenses	Working as expected	Pass

8.2 User Acceptance Testing

1. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	9	3	1	2	15
Duplicate	2	1	2	1	6
External	1	2	0	3	6
Fixed	10	2	4	11	27
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won't Fix	0	5	2	1	8
Totals	22	13	11	19	65

2. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Interface	13	0	3	10
Login	20	0	3	17
Logout	5	0	0	5
Add Expense	15	0	2	13
Limit	5	0	0	5
Report	5	1	2	3
Sign up	3	0	1	2

RESULTS

9.1 Performance Metrics

Leadtime - 4 months
Cycle time - 10 Min
Team velocity

ADVANTAGES & DISADVANTAGES

Advantages

When it comes to personal finance, being out of control is not something anybody would strive for. There's nothing financially worse than feeling like you don't have any idea what's going on with your money.

The good news is, when you make an effort to record every financial transaction you make, you are essentially, taking the reins on anything and everything involving your money. At any one time, you will know exactly how much money is sitting in your bank account, and how much you can spend.

In other words, when you track your expenses, you take complete control over your finances.

If you have any plans on saving, investing, getting out of debt, or building wealth, what is holding you accountable. I mean, we can all set financial goals, and have financial dreams, but if you aren't tracking your expenses, there is nothing to hold you accountable when you make a bad financial decision.

Tracking your expenses holds you accountable to your future financial goals. And in the long run, that can be the difference between broke and wealthy.

Disadvantages

Your information is less secure, and probably being used and sold. If the service is free, then the product is you. Mint.com, like other financial apps, is a free service. They have to pay their bills somehow, so regardless of what their privacy policy may or may not say, just assume that your spending history and trends are going to be recorded and analyzed, by someone, somewhere. Now, you shouldn't have to worry about credit card fraud or **identity theft**, these companies are large enough and secure enough that you'll never have to worry about something like that. Just recognize that your information, most likely anonymous, will be used and potentially even sold. Personally, I have no problem with that, but if you do, then make sure you avoid these types of services.

CONCLUSION

Recording your expenses daily can ensure that you are financially aware all year long and not just during tax season. Knowing where your money is going and how much you're spending can improve your spending habits. So, using the daily expense tracker application is important to lead a happy family. Daily expense tracker helps the user to avoid unexpected expenses and bad financial situations. This Project will save time and provide a responsible lifestyle.

FUTURE SCOPE

Year-on-year, modern expense management software undergone a continuous evolution from traditional back-office function to strategic internal set of processes. But would it be sufficient to meet the needs of next-gen companies? Have you ever thought how the next-generation software should look like? As the requirements of companies evolve continuously, the software should undergo a series of changes to meet the growing needs of next generation companies.

The next-generation travel and expense (T & E) management apps should not only just accelerate the expense management process but also should come with mobile and cloud integration capabilities that add tremendous value to the business bottom line. Future T & E management software should be able to provide greater visibility into spending and standardize critical procedures.
